**We work on solutions for improving
IV therapy in hospital wards and home cares.**

Patients

A photograph of a busy hospital ward. Numerous patients, mostly women wearing colorful saris and headscarves, are seated on hospital beds. Many have IV stands with bags hanging from them. The ward is brightly lit with overhead lights, and there are windows in the background. The overall atmosphere is one of a busy, active medical facility.

Expecting safety and good experience with IV medications in hospitals.

“One in five people on an IV drip have suffered complications because they were given too much or too little fluid. “

National Institute for Health and Care Excellence , UK 2013

Simple effective solutions to reduce workload in Setting Monitoring and Managing drips

30 percent of time spend in medication administration and monitoring.

Nurses

A photograph of a hospital ward. In the foreground, a blurred figure of a person in green scrubs is walking. In the background, a nurse in purple scrubs is standing near a patient's bed. Another patient is lying in a bed to the left. The room has white walls, blue curtains, and medical equipment.
