

INTRODUCING THE CAHO CARBON TOOL

Every hospital has a pulse. Now it has a carbon record too.

A single platform for hospitals to measure their Scope 1 & 2 emissions, plan credible reductions, track performance over time, and have it all reviewed by qualified professionals — built for the realities of Indian healthcare facilities.

01 • MEASURE Scope 1 & 2 Inventory Build a defensible ground-level baseline of direct and energy-linked emissions across your facility — the starting entry in every hospital's carbon ledger.	02 • ACT Reduction Action Plans Turn the inventory into a working plan — practical, prioritised steps your facilities and biomedical teams can actually implement.
03 • TRACK Performance Trends Watch the line move. Monitor emissions performance period over period, and see reduction efforts reflected in the data.	04 • REVIEW Expert Review Every submission is reviewed by qualified professionals — who then place the hospital on a rating tier, below.

RATING TIERS • SCORE BANDS

Four levels, from entry to excellence

0 – 39 Initiated Starting point. Carbon data not yet fully collected or structured.	40 – 59 Engaged Foundations in place — inventory and action plan exist, monitoring underway.	60 – 79 Progressive Committed — actively managing carbon with measurable results and systems in place.	80 – 100 Advanced & Carbon Leader Strong performer — significant reductions and clean energy transition begun.
