

QUALITY IN WOMEN'S HEALTH REHABILITATION: *MEASURING WHAT MATTERS*

Why does this topic matter, more than ever?

A woman may not remember every exercise we prescribe, but she will always remember how our care changed her ability to move, work, care for her family, and live without fear. Quality in women's health rehabilitation is about making every clinical decision count—not just for better outcomes, but for better lives

Key Learning Objectives

- To understand the fundamentals of quality in women's health rehabilitation.
- To explore meaningful measures that reflect patient outcomes and quality of care.
- To discuss practical strategies to improve rehabilitation services.
- To promote collaborative, patient-centred practice for better health outcomes

Who can attend:

Open to all Rehab and Quality professionals - Physiotherapists, Psychiatrists, Rehab Nurses, Medical Doctors, and Students.
